

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Analytic Geometry and Calculus

BY FREDERICK S. WOODS AND FREDERICK H. BAILEY

Professors of Mathematics, Massachusetts Institute of Technology

Here in one volume is work which may be completely covered by an average college class in two years. After the early lessons, it does not teach calculus and analytic geometry as separate subjects, but calls for the processes of either as needed. The range of practical applications has not been diminished, and methods of approximation, including the determination of empirical equations, the use of Taylor's series in calculation, and approximate integration, have been added. The problems number two thousand. A revision and abridgment of the authors' "Course in Mathematics for Students of Engineering and Applied Science." \$3.00.
